

ServStack Details

ServStack Platform Menu — Marketing-Ready Overview

Platform Module	High-Impact Value Proposition
Dashboard	A real-time command center giving executives instant visibility into revenue, margins, sales trends, and branch performance across the entire restaurant network.
Manual POS Entry	Ensures business continuity by allowing staff to record sales even when the POS is offline — no lost data, ever.
Transactions	A unified ledger of every sale across all branches, enabling fast audits, reconciliation, and operational transparency.
Branches	Centralized branch management for multi-location operators — configure, monitor, and compare locations effortlessly.
Sales Analytics	Deep insights into dayparts, channels, top sellers, and underperformers to drive smarter menu and operational decisions.
Inventory	Real-time stock tracking that reduces waste, prevents shortages, and keeps kitchen operations running smoothly.
Menu Management	A single source of truth for menu items, pricing, and availability across all branches — consistent and easy to update.
Categories	Organize menu items into intuitive groups to power cleaner reporting and more strategic menu engineering.
Branch Targets	Set performance goals and track progress in real time, enabling accountability and data-driven leadership.
Staff	A snapshot of staffing levels and operational readiness across branches, supporting workforce planning and oversight.
Alerts	Intelligent system notifications that surface issues before they become problems — from inventory shortages to performance dips.
Reports	Downloadable, executive-ready reports covering revenue, inventory, transactions, and operational KPIs.
API Keys	Secure integration management for connecting POS systems, delivery apps, and third-party tools.
Kitchen (KDS)	A modern kitchen display system that streamlines order flow and eliminates paper tickets.
POS	Point-of-sale page where customer orders are entered and routed to the kitchen for fulfilment.
User Management	Role-based access control to keep your operations secure and your team aligned.
Settings	System-wide configuration for branding, notifications, and operational preferences.

Recommended ServStack Menu Structure

1. Dashboard
2. POS
3. Kitchen (KDS)

4. Executive Corner

These are the high-level, decision-maker tools.

- Dashboard
 - **Sales Analytics**
 - **Branch Targets**
 - **Reports**
-

2. Operations

Daily operational tools used by managers and supervisors.

- **Transactions**
- **Manual POS Entry**
- **Inventory**
- **Menu Management**
- **Categories**
- ~~**Kitchen (KDS)**~~
- ~~**POS**~~

3. Branch & Workforce Management

Everything related to managing locations and people.

- **Branches**
- **Staff**

4. System Intelligence

Tools that surface issues and keep the business running smoothly.

- Alerts

5. Administration

Technical and security-related configuration.

- User Management
- API Keys
- Settings
- Sign Out

Recommended Dinelytix Role & Permission Model

This structure keeps things simple, secure, and intuitive for both executives and operators.

1. Super Admin (Platform Owner)

Who they are: System owner, IT admin, or platform controller.

Access level: Full access to everything.

Permissions include:

- All dashboards & analytics
- All operational modules (POS, KDS, Inventory, Menu, etc.)
- All branches
- User Management
- API Keys
- Settings
- Create/edit/delete anything
- AI Assistant

Use case: Your internal team or the restaurant group's top-level admin.

2. Executive / CEO / Director

Who they are: Leadership who need visibility, not configuration.

Access level: Read-only insights across all branches.

Permissions include:

- Dashboard
- Sales Analytics
- Branch Targets
- Reports
- Branch Performance
- Staff Overview
- Alerts (view only)
- AI Assistant

No access to:

- Menu editing
- Inventory adjustments
- POS configuration
- User management
- API keys

Use case: High-level decision makers.

3. Operations Manager (Multi-Branch Manager)

Who they are: Regional managers or operations leads.

Access level: Manage operations across multiple branches.

Permissions include:

- Dashboard
- Sales Analytics
- Transactions
- Inventory (view + update)
- Menu Management (edit)

- Categories
- Branch Targets (edit for assigned branches)
- Staff (view + update)
- Alerts
- Reports
- AI Assistant

No access to:

- API Keys
- User Management
- Global Settings

Use case: Oversees performance and operations across several locations.

4. Branch Manager

Who they are: Manager of a single restaurant location.

Access level: Full control of their branch only.

Permissions include:

- Dashboard (branch-specific)
- POS
- Transactions
- Manual POS Entry
- Inventory (update stock, record waste)
- Menu Management (branch-level overrides if allowed)
- Staff (manage schedules/assignments)
- Alerts
- Reports (branch-level)

No access to:

- Other branches
- API Keys
- User Management
- Global Settings

Use case: Day-to-day branch operations.

5. Supervisor / Shift Lead

Who they are: On-duty supervisors.

Access level: Limited operational control.

Permissions include:

- POS
- Manual POS Entry
- Transactions (view)
- Inventory (update counts, record waste)
- KDS (Kitchen Display System)
- Staff (view only)
- Alerts (view only)

No access to:

- Menu editing
- Branch targets
- Reports
- Settings

Use case: Supports branch manager during shifts.

6. Staff / Cashier / Frontline Worker

Who they are: Cashiers, servers, baristas, etc.

Access level: Minimal.

Permissions include:

- POS
- Manual POS Entry
- KDS (if kitchen staff)
- View their own schedule (if applicable)

No access to:

- Dashboard
- Analytics
- Inventory
- Menu

- Reports
- Settings

Use case: Perform daily tasks without touching sensitive data.

7. Kitchen Staff

Who they are: Cooks, kitchen assistants.

Access level: Operational, not analytical.

Permissions include:

- Kitchen (KDS)
- View menu items
- View alerts relevant to kitchen

No access to:

- POS
 - Inventory adjustments
 - Reports
 - Settings
-

8. Auditor / Compliance Reviewer

Who they are: Finance, compliance, or external auditors.

Access level: Read-only across all data.

Permissions include:

- Dashboard
- Transactions
- Inventory logs
- Reports
- Alerts
- Branch performance

No access to:

- Editing anything

- User management
 - API keys
-

9. Developer / Integration Admin

Who they are: Technical staff integrating POS or third-party systems.

Access level: Technical modules only.

Permissions include:

- API Keys
 - Settings (technical only)
 - POS configuration
 - No access to operational data unless needed
-

Summary Table (Quick View)

Role	Access Level	Typical Permissions
Super Admin	Full	Everything
Executive	Read-only (all branches)	Dashboard, Analytics, Reports
Operations Manager	Multi-branch	Ops modules, analytics, reports
Branch Manager	Single branch	Inventory, menu, staff, transactions
Supervisor	Shift-level	POS entry, KDS, inventory updates
Staff	Minimal	POS entry, KDS
Kitchen Staff	Kitchen-only	KDS, menu view
Auditor	Read-only	Reports, logs, analytics
Developer	Technical	API keys, POS config

ServStack Permissions Matrix (Roles × Modules)

A clear, scalable RBAC model for restaurant operations and executive oversight.

Legend

- ✓ = Full Access
-  = View Only
- ⊕ = Limited / Operational (e.g., update inventory, enter POS, manage shift tasks)
- = No Access

Permissions Matrix

Module	Super Admin	Executive	Ops Manager	Branch Manager	Supervisor	Staff	Kitchen Staff	Auditor	Developer
Dashboard	✓		✓	✓ (branch only)	 (branch)	—	—		—
Sales Analytics	✓		✓		—	—	—		—
Branch Targets	✓		✓		—	—	—		—
Reports	✓		✓	✓ (branch)	—	—	—		—
Transactions	✓		✓	✓		⊕ (POS entry only)	—		—
Manual POS Entry	✓	—	✓	✓	✓	⊕	—	—	—
Inventory	✓		✓	✓	⊕	—	—		—

[illegible]

Here’s a **practical pricing strategy for Ghana** that balances **mass adoption (free tier)** with **clear upgrade paths tied to business value**.

I’ve structured it so:

- Free tier = **entry + habit formation**
- Paid tiers = **unlock revenue + operational control**
- Pricing aligns with **SMEs → growing chains → enterprise operators**

1. Pricing Strategy Overview

Tier	Positioning	Target Customer	Goal
Free	Entry / Starter	Small restaurants, kiosks	Drive adoption
Basic	Growth	Single-location restaurants	Monetize early
Pro	Scale	Multi-branch operators	Core revenue tier
Enterprise (Optional)	Advanced	Large chains	High-value contracts

2. Tier Structure & Feature Packaging

Free Tier (Adoption Engine)

Goal: Get as many restaurants onboard as possible

Included Features (Keep it useful but limited)

- POS (basic)
- Manual POS Entry
- Transactions (limited history – e.g., 7–14 days)
- Menu Management (limited items)
- Categories
- Basic Dashboard (single branch only)
- User Management (max 1–2 users)
- Settings (basic)

Restrictions

-  No inventory
-  No analytics depth

- **✗** No multi-branch
- **✗** No reports download
- **✗** No alerts

Pricing

FREE

Strategy Insight

- Must be **good enough to run a small food business**
- But missing **cost control + insights** → forces upgrade

Basic Tier (Monetization Entry)

Goal: Convert single-location businesses

Included Features

Everything in Free +

- Full Transactions history
- Sales Analytics (basic)
- Reports (limited export)
- Inventory (basic tracking)
- Alerts (basic)
- Up to 1 branch
- Up to 5 users

Pricing (Ghana Market)

GHS 150 – 300 / month (~\$10–\$20)

Value Message

“Understand your sales and control your stock.”

Pro Tier (Core Revenue Tier – Most Important)

Goal: Target serious operators & multi-branch restaurants

Included Features

Everything in Basic +

- Branches (multi-location support)
- Advanced Dashboard (cross-branch view)
- Branch Targets
- Advanced Sales Analytics
- Full Inventory Management (with cost tracking)
- Staff module
- Alerts (advanced)
- Reports (full export)
- Kitchen (KDS)
- API Keys (limited integrations)

Pricing

GHS 500 – 900 / month (~\$35–\$60)

Value Message

“Run all your branches from one command center.”

Enterprise Tier (Optional but Powerful)

Goal: Large chains & premium clients

Included Features

Everything in Pro +

- Unlimited branches
- Full API access
- Custom integrations (POS, delivery apps)
- Advanced reporting & data exports
- Priority support
- Custom onboarding

Pricing

GHS 1,500 – 3,000+ / month (\$100–\$200+)

or custom pricing per deal

Value Message

“Enterprise-grade control and integration for large restaurant networks.”

3. Feature-to-Tier Mapping

Feature	Free	Basic	Pro	Enterprise
Dashboard (basic)	✓	✓	✓ (advanced)	✓
POS	✓	✓	✓	✓
Manual POS Entry	✓	✓	✓	✓
Transactions	Limited	✓	✓	✓
Menu Management	Limited	✓	✓	✓
Categories	✓	✓	✓	✓
Inventory	✗	Basic	Advanced	Advanced
Sales Analytics	✗	Basic	Advanced	Advanced
Branches	✗	1	10	Unlimited
Branch Targets	✗	✗	✓	✓
Staff	✗	✗	✓	✓
Alerts	✗	Basic	Advanced	Advanced
Reports	✗	Limited	Full	Full
Kitchen (KDS)	✗	✗	✓	✓
User Management	Limited	✓	✓	✓

4. Key Monetization Strategy (Important)

A. What Drives Upgrades

Trigger	Why it works
Multi-branch need	Natural growth point
Inventory tracking	Direct impact on profit
Analytics	Owners want insights
Reports export	Needed for accounting
KDS	Operational efficiency

B. Smart Limits to Force Upgrade

Use **soft limits instead of blocking usage completely**:

- “You’ve reached 80% of your menu item limit”
 - “Upgrade to track inventory cost”
 - “Multi-branch view available in Pro”
-

C. Ghana Market Reality

Keep pricing:

- Affordable for SMEs
- But clearly **value-based (not cheap positioning)**

Psychological anchors:

- GHS 150 feels affordable
 - GHS 500+ feels “serious business tool”
-

5. Recommended Final Pricing

Tier	Price
Free	GHS 0
Basic	GHS 199 / month
Pro	GHS 699 / month
Enterprise	Custom (starting ~GHS 1,500+)

6. Growth Strategy (Critical Insight)

To win in Ghana:

1. Lead with Free

- Make onboarding **very fast (under 5 minutes)**
- Let them **start selling immediately**

2. Upgrade Moment = Pain

- Inventory confusion

- Multiple branches
- Need for reports

3. Sell Outcomes, Not Features

Instead of:

“Inventory tracking”

Say:

“Stop losing money from missing stock”

7. Final Positioning

BranchIQ – Dinelytics should be positioned as:

“The command center for restaurant growth and control.”
